Enhancing global environmental benefits
through excellence in evaluation

Evaluating Global Environmental Benefits: Lessons from the GEF

Dr. Juha Uitto

Director, Independent Evaluation office, Global Environment Facility
juitto@TheGEF.org

University of Tsukuba – 21 November 2018

Outline

- 1 GEF and the global environment**
- 2 Evaluating performance and impact**
- 3 Innovative approaches**
 - Land degradation and value for money**
 - Transformational change**
 - Additionality**
- 4 Conclusions**

SECTION 1

GEF and the Global Environment

Scale

**Climate
change**

**International
waters**

**Chemicals
and waste**

Biodiversity

Forests

**Land
degradation**

Strategic relevance

Conventions. Main funding mechanism for:

Also relevant to the

Countries

More than
140
recipient
countries

Support for
middle
income
countries
remains
important

Support to
**LDCs and
SIDS**
has increased

SECTION 2

Evaluating Performance and Impact

Role of evaluation

- ▶ Evaluation is judgment made of the relevance, appropriateness, effectiveness, efficiency, impact and sustainability of development efforts, based on agreed criteria and benchmarks among key partners and stakeholders
- ▶ It involves a rigorous, systematic and objective process in the design, analysis and interpretation of information to answer specific questions
- ▶ It provides assessments of what works and why, highlights intended and unintended results, and provides strategic lessons to guide decision-makers and inform stakeholders

Evaluation criteria

Objective

To provide solid evaluative evidence to inform the replenishment negotiations for

GEF-7

Methodology

29 evaluations and studies

Mix of qualitative and quantitative approaches including geospatial analysis

Formative approaches to evaluate ongoing programs

Limitations

Limitations imposed by data and timing

A world map with a dark blue background. The landmasses are outlined in white. Numerous countries are highlighted in a solid red color, indicating site visits. These include Mexico, Central American countries (Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, Panama), Caribbean islands (Cuba, Haiti, Santo Domingo, Jamaica, Trinidad and Tobago, Barbados, Guyana, Suriname, French Guiana), South American countries (Venezuela, Colombia, Ecuador, Peru, Bolivia, Paraguay, Uruguay, Argentina, Chile, Brazil, and the Falkland Islands), and various countries in Africa (Morocco, Algeria, Tunisia, Libya, Egypt, Sudan, South Sudan, Ethiopia, Kenya, Tanzania, Uganda, Rwanda, Burundi, DRC, Congo, Angola, Namibia, Botswana, Zimbabwe, Mozambique, Swaziland, Lesotho, South Africa, Madagascar, Mauritius, Reunion, Comoros, Seychelles, and Maldives). In Europe, the United Kingdom, Ireland, France, Germany, Poland, Czech Republic, Slovakia, Austria, Hungary, Switzerland, Italy, Greece, Turkey, and Cyprus are highlighted. In Asia, India, Pakistan, Bangladesh, Nepal, Bhutan, China, Mongolia, North Korea, South Korea, Japan, Philippines, Indonesia, Malaysia, Brunei, Singapore, and Timor-Leste are highlighted. In Oceania, Australia and New Zealand are highlighted. The text 'Site visits to all regions' is written in a light blue font in the upper left corner of the map.

Performance and Impact

Satisfactory outcomes

of projects have outcomes that are likely to be sustained

Drivers of good performance:

- Project design
- Quality of implementation and execution
- Materialized co-financing

- Performance and sustainability of outcomes > in middle income countries
- Institutional capacity challenges in Africa

PERFORMANCE AND IMPACT

Broader adoption and transformational change

of projects achieved
broader adoption

of projects achieved
environmental stress reduction

Mechanisms for broader adoption:

- + Mainstreaming and replication
- Scaling-up and market change

Success factors for transformational change:

- Clear ambition in designs
- Addressing market reforms through policies
- Mechanisms for financial sustainability
- Quality of implementation and execution
- May be achieved by projects of different size

FOCAL AREA STUDIES

Common findings

Relevant to conventions

Strong performance ratings on outcomes with limited variation

Sustainability of outcomes (Land degradation & Biodiversity)

M&E Design (International Waters and Chemicals)

M&E Implementation (International Waters, Chemicals and Multifocal)

Variation in private sector engagement

Transformational change

SECTION 3

Innovative Approaches

A landscape photograph showing a grassy hillside with scattered trees and a small pond in the foreground. The text "Land Degradation and Value for Money" is overlaid in white.

Land Degradation and Value for Money

LAND DEGRADATION

Evolution of the strategy

GEF-1-2

Operational Program on Integrated Ecosystem Management

LD seen as a

“linkage activity”

GEF-3

Operational Program on SLM.

LDFA established as a focal area.

GEF the financial mechanism for the UNCCD.

GEF-4

Focal area strategy on LDFA
Shift towards multifocal and programmatic approaches

GEF-5

Focal area strategies linked with the UNCCD's 10 year strategy

GEF-6

Focal area strategies alignment towards LDN

LAND DEGRADATION Portfolio

\$3.4 billion
618 projects
with an LD
component
(58% multifocal)

Cofinancing
20.4
billion

Shift towards
integrated
landscapes

Distribution of GEF
land degradation projects

Results: Performance

Impact assessment

Mixed methods and triangulation of findings

Apr 2009

Impact assessment

Mixed methods and triangulation of findings

LAND DEGRADATION

Value for money analysis: 3 main objectives

1

Impact of GEF land degradation interventions?

2

Factors associated with the environmental outcomes?

3

Value for money in terms of carbon sequestered?

1. Geocoding

2. Geospatial data

3. Data integration

4. Matching analysis

6. Valuation of Carbon
sequestration

5. Causal tree
analysis

Methodology

LAND DEGRADATION

Quasi-experimental method

LAND DEGRADATION

Machine learning and causal tree

LAND DEGRADATION

Repeated model simulation

LAND DEGRADATION

Value for money

\$1:1.08

43.52
tC/ha

+

Vegetation
productivity

—

Lag time of
4.5 to 5.5 years
for impacts to be
observed

Access to electricity
associated with
higher impact

Higher impact
observed in areas with
poor initial conditions

forest loss and
land fragmentation

LAND DEGRADATION

Bang for the buck

\$1:1.08

Land degradation

Strategy

Shift towards **integrated landscape**

Shift from linkages towards
land degradation **neutrality**

**Climate risks, contextual factors,
restoration**

Portfolio

High level
of effort in

Africa

Addresses the
local
socioeconomic
drivers

A photograph of two hippos swimming in a body of water, likely a lake or river. The water is calm and reflects the surrounding environment. In the background, several dead, skeletal trees stand in the water, their trunks partially submerged. The sky is a pale blue, and distant hills are visible on the horizon. The overall scene is serene and natural.

Transformational Change & Additionality

Transformational change

- ▶ Deep, systemic, and sustainable change with large-scale impact
- ▶ Criteria:
 - (1) Relevance
 - (2) Depth of change
 - (3) Scale of change
 - (4) Sustainability
- ▶ Eight cases purposefully selected

PERFORMANCE AND IMPACT

Examples: transformational change

Uruguay

Wind power
2008: 0%
2016: 33%

Africa

1.3 mln – quality
solar lanterns;

Private market
transformed

Amazon

13.2 mln ha –
strict protection
10.8 mln ha –
sustainable use

China

Wind power
2005: 1.3 GW
2015: 129.3 GW

Namibia

98% PAs improved;

Doubled number of
wild dogs, leopards,
cheetahs, lions
(2004–12)

Areas of GEF's Additionality

Specific Environmental Additionality

- ▶ Value added to achieve global environmental benefits

Legal/Regulatory Additionality

- ▶ Transforming legal/regulatory forms to support environmental sustainability

Institutional Additionality/Governance Additionality

- ▶ Support to existing institution to efficient/sustainable transformation

Financial Additionality

- ▶ Incremental cost from national/local benefits to global environmental benefits

Socio-economic Additionality

- ▶ Livelihood and social benefits through GEF activities

Innovation Additionality

- ▶ Technology and knowledge

Independent
Evaluation Office
GLOBAL ENVIRONMENT FACILITY

SECTION 4

Conclusions

Conclusions on the GEF

RELEVANCE

1. Serves multiple conventions and broad range of environmental issues
2. Strong Support to LDCs and SIDS

PERFORMANCE

3. Long history of good performance
4. Ability to address linkages and synergies between focal areas

TRANSFORMATIONAL

5. Ability to Create an enabling environment in countries through legal and regulatory reforms
6. Delivers innovative financial models and risk-sharing approaches

Lessons for evaluation

**Partner with
global institutions**

**Use mixed
approaches
and methods**

**Continue exploring
new technology**

**Approach evaluation
as a dynamic
learning process**

Implications for evaluation

- ▶ Evaluation: How? Why? Under what conditions?
Dynamic!
- ▶ Must look beyond individual projects
- ▶ Define system boundaries
- ▶ Methodological rigor and credibility, adaptability
- ▶ Unintended consequences
- ▶ Do interventions make a difference?

Sustainable development lens!

Thank you!
