4 RELEVANCE (2/2)

The following questions refer specifically to the individual SCCEs; Africa Biomes - Sahel and Savanah / Least Developed Countries / Small Island Developing States. In case the project covers multiple SCCEs, answer in the text box for each.

| CCE's covered: {{ Q5 }} |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| * 22. Does the <u>project description</u> talk about specific <u>relevance</u> of the project to country priorities, as they at for the specific SCCE(s) covered? (Always explain your answer) |
| Yes, clearly |
| Yes, to some extent |
| ○ No |
| Please explain your answer: |
| |
| * 23. Does the <u>contextual description</u> talk about specific environmental challenges for the country covered? Focus on specific Sahel or Savanah, LDC or small island environmental challenges. (Always explain your answer) |
| Yes, clearly |
| Yes, to some extent |
| ○ No |
| Please explain your answer: |
| |
| * 24. Do the objectives, components and/or activities take into account the specific environmental challeng identified in the previous question? (Always explain your answer) |
| Yes, clearly |
| Yes, to some extent |
| ○ No |
| Please explain |
| т повое сърнант |

Capacity and governance changes (refers to the three GEF contribution areas: Implementing Strategies, Institutional Capacity,

7 TRADE-OFFS, SYNERGIES AND RISKS

<u>Trade-off</u> expresses the idea that "when some things are gained, others are lost". it is the notion that it is not possible to maximize benefits in two or more sectors at the same time. Trade-offs can be between sector objectives, between environmental and socioeconomic outcomes, between geographic locations, and between global and local benefits, in addition to temporal trade-offs between short-term and long-term benefits.

<u>Synergy</u> refers to multiple benefits that are achieved either simultaneously through a single intervention, or through the interaction of outcomes of at least two interventions. Synergy is also used to refer to the benefits achieved by a project or program in more than one sector.

| * 32. Do any of the project documents mention trade-offs and/or synergies between environmental and socioeconomic outcomes that might occur or have occurred as a result of this project? (Keywords: trade-off, trade off, tradeoff, synergy, synergies, nexus) Yes No |

Gender rating

Gender-blind: Project does not demonstrate awareness of the set of roles, rights, responsibilities, and power relations associated with being male or female.

Gender-aware: Project recognizes the economic / social / political roles, rights, entitlements, responsibilities, obligations and power relations socially assigned to men and women, but might work around existing gender differences and inequalities, or does not sufficiently show how it addresses gender differences and promotes gender equality.

Gender-sensitive: Project adopts gender sensitive methodologies (a gender analysis or social analysis with gender aspects is undertaken, gender disaggregated data are collected, gender sensitive indicators are integrated in monitoring and evaluation) to address gender differences and promote gender equality.

Gender-mainstreamed: Project ensures that gender perspectives and attention to the goal of gender equality are central to most, if not all, activities. It assesses the implications for women and men of any planned action, including legislation, policies or programs, in any area and at all levels.

Gender-transformative: Project goes beyond gender-mainstreaming and facilitates a 'critical examination' of gender norms, roles, and relationships; strengthens or creates systems that support gender equity; and/or questions and changes gender norms and dynamics.

Not gender-relevant: Gender plays no role in the planned intervention. (Note that in practice it is rare for projects to not have any gender relevance. If a project touches upon the lives of people, either directly or indirectly, it has gender relevance).

* 42. What is the project's gender rating at entry?

(Based on the PD, PAD, PFD, Request for CEO Endorsement)

* 43. What is the project's gender rating at completion?

(Based on the TE, TER, ICR, ICRR)

9 CROSS CUTTING - RESILIENCE (1/2)

| | | |
| | | |

10 CROSS CUTTING - RESILIENCE (2/2)

In the context of the GEF, climate resilience may be considered at three levels:

Resilience as risk management: A first level of response emerges from pure risk management considerations: sustained delivery of future GEB's is at risk from climate change; therefore, projects ought to be screened for climate risks, and suitable risk management measures should be developed and adopted in project design and implementation. This would increase the resilience of the GEF portfolio to climate change. Such a de-risking approach is now being widely adopted by most multilateral and bilateral funding organizations, starting with the development and adoption of screening tools.

Resilience as a co-benefit: GEF focal area interventions offer the opportunity of enhancing resilience of human socio-economic systems to climate change; it is therefore worth seeking resilience co-benefits of GEF focal area interventions, or in some cases, use approaches practiced in other focal areas, specifically for enhancing the climate resilience of human systems. This is the underlying logic of ecosystem-based adaptation, where ecosystem restoration serves as a means for reducing the vulnerability of human socio-economic systems.

Resilience integrated into a multiple benefits framework: It is increasingly important to develop frameworks and approaches that allow multiple objectives and multiple benefits to be achieved simultaneously across social and natural systems. In this framing, resilience is not seen as an add-on (additional risk to be managed) or a co-benefit, but rather as a system property that needs to be considered together with all of the other system properties, and thus linked to the idea of sustainable development.

Reference: Delivering Global Environmental Benefits for Sustainable Development. STAP Report to the 5th GEF Assembly, México, May 2014.

| * 45. Is there evidence of resilience thinking in project documents as: (Select all that apply) | |
|--------------------------------------------------------------------------------------------------|--|
| Risk management | |
| Co-benefit | |
| Integrated into multiple benefits framework | |
| Yes, but not in line with above three answer options | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

The type of resilience system thinking

Resilience from a systems or engineering perspective (absorptive): This was the original, relatively narrow focus of resilience; the ability of a system to bounce back or return to equilibrium following disturbance, referred to by Holling (1973) as 'engineering resilience'. This comes down to absorptive (coping) capacity, which Cutter et al. (2008, p.663) define as 'the ability of the community to absorb event impacts using predetermined coping responses'.

Resilience as incremental change (adaptive): adaptive resilience refers to the various adjustments (incremental changes) that people undergo in order to continue functioning without major qualitative changes in function or structural identity. These incremental adjustments and changes can take many forms (e.g. adopting new farming techniques, change in farming practices, diversifying livelihood bases, engaging in new social networks, etc). These adaptations can be individual or collective, and they can take place at multi-level (intra-household, groups of individuals/households, community, etc).

Resilience as transformational change (transformative): transformational changes often involve shifts in the nature of the system, the introduction of new state variables and possibly the loss of others, such as when a household adopts a new direction in making a living or when a region moves from an agrarian to a resource extraction economy. It can be a deliberate process, initiated by the people involved, or it can be forced on them by changing environmental or socioeconomic conditions.

What the growing body of literature that discusses transformational changes highlights is that the main challenges associated with transformation are not of a technical or technological nature only. Instead, as pointed out by O'Brien (2011), these shifts may include a combination of technological innovations, institutional reforms, behavioral shifts and cultural changes.

Reference: Béné, C., Godfrey-Wood, R., Newsham, A., and Davies, M., 2012. Resilience: New utopia or new tyranny? Reflection about the potentials and limits of the concept of resilience in relation to vulnerability reduction programmes. IDS working Paper 405. Brighton: Institute of Development Studies (IDS). ISBN 978 1 78118 091 4.

* 46. For the resilience thinking mentioned above, what kind of resilience thinking?

Risk management

Co-benefit

Integrated into multiple benefits framework

47. Feel free to add information on your scoring of the previous question.(Only a short recap if you feel it is interesting how they approached resilience, with references)

* 48. Are there clear linkages in project documents towards country priorities on resilience?

Yes

No

Please explain

15 SUSTAINABILITY COHORT - BROADER ADOPTION

Broader adoption is said to have taken place when governments and other stakeholders adopt, expand, and build on the initiatives that the GEF funds, during program/project implementation or afterwards, as a result of initial successes.

Broader adoption occurs through five mechanisms: sustaining, mainstreaming, replication, scaling-up, and market change.

Sustaining. A GEF-supported intervention or outcome is continued to be implemented by the original beneficiaries without GEF support through clear budget allocations, implementing structures, and institutional frameworks so they can keep reaping the benefits and provide incentives for adoption by other stakeholders.

Mainstreaming. Information, lessons, or specific aspects of a GEF initiative become part of a stakeholder's own initiatives, such as laws, policies, regulations, and programs. Mainstreaming may occur through governments and/or development organizations and other sectors.

Replication. A GEF-supported intervention is reproduced at a similar administrative or ecological scale, often in other geographical areas or regions.

Higher level mechanisms:

Scaling-up. GEF-supported initiatives are implemented at a larger geographical scale, often expanded to include more political, administrative, economic, or ecological components. Scale-up allows concerns that cannot be resolved at lower scales to be addressed, and promotes the spread of GEF contributions to areas contiguous to the original intervention site.

Market change. A GEF-supported intervention influences economic demand for and supply shifts to more environment-friendly products and services. Market change may encompass technological changes, policy and regulatory reforms, and financial instruments

* 64. Based on documents (i.e. TE, TER, ICR, ICRR, APR rating document), did ANY broader adoption take place, <u>during the project's implementation</u>?

(Fill out for each mechanism, only one answer per row)
